

Framing and colour specials work: hello world

A raw XeTeX call works well enough, too:

A call to the special I wrote seems to be in order:

A call to the special I wrote seems to be in order, even when framed:

But any call to the `\externalfigure` macro from `core-fig` fails, getting the correct figure size, but failing to put the `\foundexternalfigure` box anywhere other than

the bottom left corner of the page, at full size.
