Exercici 1. Resol: $(x+2) - x + 2 - 8x = 7x - 2 - (7-2x) + 35$
 $-(x+2) - 2(-3-x) + 5x - 3 = 5(x+2) - 6x - 16$
 $-3(x+2) - 1 + 5(-x-4) = -7(-5x-2) + x - (-x+2) + 51$
 $5(5x-2) - 30 - 20(-3x+2) = 5 - (10x-2) + 5x + 183$
 $8(x-3) + 5 - 40x = 5 - (8x-5) + 13$
 $5-3(4x-1) + 6(x-10) + 3 = 5 + 2(x+2) - (10x-5) - 64$
 $5(x-2) + 5x - (2-5x) + 1 = 3(x-2) + 3$
 $12-12(2-3x) + 120 = -48(x+2) + 239$
 $1 - (x-4) - (5-2x) - (-3-4x) = 6(2x-3) - 7(-2x+3)$
