

What about measuring (normal) 12 mm, 3 cm and 5 km?

What about measuring (inline math) 12 mm, 3 cm and 5 km?

Hier is the first footnote^{1 2 3 4 5 6 7 8 9}.

- The base font is Dolly at 13.opt.
- Math is typeset with Times $c = \sqrt{a^2 + b^2}$
- The math-font is Tx-font
- The first footnote should be typeset with Dolly font.
- The second footnote should be typeset in Helvetica^{10 11 12 13}.

So it is indeed the case, that all environments switch to a base-body-font if setup with `\setupbodyfont`
