

Here is lua.

I'm sending some picture names to Context in order to get back their sizes.

=====

Here is ConTEXt and what I got from Lua:

```
2007-01-01—Intro.png
2007-01-01—Neujahrsballade—1.png
2007-01-01—Neujahrsballade—2.png
```

Now I'm working ... and write my answers to a file for lua:

```
2007-01-01—Intro.png width=3000pt height=2000pt
2007-01-01—Neujahrsballade—1.png width=1200pt height=900pt
2007-01-01—Neujahrsballade—2.png width=1600pt height=1200pt
```

=====

Here is lua again and what I got back from Context:

```
2007-01-01—Intro.png width=3000pt height=2000pt
2007-01-01—Neujahrsballade—1.png width=1200pt height=900pt
2007-01-01—Neujahrsballade—2.png width=1600pt height=1200pt
```
