Location=text not working in main body

```
1  one
2  two
3  three
```

But it does work if a custom typing environment is created.

```
1      one
2      two
3      three
```

Still works if used in a column

```
1      one                           :-)
2      two
3      three
```

But doesn't work if used in tabulate

```
one
two                        No line numbers at all :-(
three
```
