T.o.c.

First Slide

■ First bullet

Avoid using too many bullets. It is better to use paragraphs.

- ▶ Especially nested bullet lists
- ▶ That make it hard to understand the main point

■ Second bullet

Nonetheless sometimes you are stuck at using bullets. In such cases, make sure that the bullets look nice.

Sample Slide

Thus, I came to the conclusion that the designer of a new system must not only be the implementer and first large-scale user; the designer should also write the first user manual.

The separation of any of these four components would have hurt T_EX significantly. If I had not participated fully in all these activities, literally hundreds of improvements would never have been made, because I would never have thought of them or perceived why they were important.

But a system cannot be successful if it is too strongly influenced by a single person. Once the initial design is complete and fairly robust, the real test begins as people with many different viewpoints undertake their own experiments.

Some math

Here is an example with display math with a long line preceeding it

$$f(x) = a_i x^i$$

and a long line following the display math.

Horizontal Image with text

The Earth, as a habitat for animal life, is in old age and has a fatal illness. Several, in fact. It would be happening whether humans had ever evolved or not. But our presence is like the effect of an old-age patient who smokes many packs of cigarettes per day — and we humans are the cigarettes.
